

Cadent

Your Gas Network

Keeping your loved ones safe

Locking cooker valve

We connect people to the gas they use, maintaining the pipe network that delivers gas safely to 11 million homes and businesses. Keeping people safe in their homes is an important part of our work. Locking cooker valves can save lives.

Working together to help you care at home

When you care for a person with a condition such as Dementia(s) or Autism it can often help to have extra measures in place to provide that extra peace of mind.

That's why we are fitting a locking cooker valve on hobs and ovens completely free of charge.

When the valve is locked, it stops the flow of gas to the cooker or hob. The carer can easily turn the valve off and on, controlling when the gas can be used.

If you are a carer or health service provider and know someone who could benefit from this free service, please contact us.

This simple safety device will help our customers retain their independence, and provide reassurance to family, friends and carers.

For more information about locking cooker valves or to apply for a free fitting, visit cadentgas.com/lcv or call **0345 835 1111**
